

# LEONARDO COLLADO-TORRES

At the Lieber Institute for Brain Development, I am part of the Data Science team whose goals include better understanding and characterizing genomics signatures in the human brain. We use high-throughput technologies such as DNA methylation and RNA sequencing. I help mentor other team members, provide support for LIBD projects and I am advancing my academic career as part of [Andrew Jaffe's lab](#).

As a quick background, I graduated from the [Undergraduate Program on Genomic Sciences](#) from the National Autonomous University of Mexico ([UNAM](#)) in 2009 and worked for two years at Winter Genomics analyzing high-throughput sequencing data. I then got a PhD in the [Department of Biostatistics](#) at Johns Hopkins Bloomberg School of Public Health thanks to a [CONACyT scholarship](#) awarded in 2011. I worked with [Jeff Leek](#) and Andrew Jaffe in developing [derfinder](#), [regionReport](#), [recount](#) as well as other applied projects.

Every day I use [R](#) and [Bioconductor](#). Occasionally I blog about them and other tools. I'm a co-founder of the [LIBD rstats club](#) and the [CDSBMexico](#) community of R and Bioconductor developers in Latin America.

## EDUCATION

2016  
|  
2011

- **PhD., Biostatistics**

Johns Hopkins Bloomberg School of Public Health  
 Baltimore, MD, USA

- **Advisors:** [Jeffrey T. Leek](#) and [Andrew E. Jaffe](#)
- **Thesis:** Annotation-Agnostic Differential Expression and Binding Analyses.
- **Description:** The goal was to develop statistical methods and software that enable researchers to differentiate the sources of variation observed in RNA-seq while minimizing the dependence on known annotation. This allows researchers to correct for technological variation and study the biological variation driving their phenotype of interest. We applied these methods to further our understanding of neuropsychiatric disorders using the Lieber Institute for Brain Development human brains collection (> 1000 samples).
